

# Delivery Channel Options

Deluxe Payment Exchange (DPX) offers delivery channels through which an external partner can interact with Deluxe and create payments utilizing the platform. Both of these channels offer different features (detailed below) that naturally lend themselves to certain use cases and business relationships.

	WEB	API
Use Case	Payer is interacting directly with DPX, utilizing the web platform. Payers can sign up directly through Deluxe or use a unique link (PURL) provided by a reseller.	Payer issues and manages payments through an API integration to the payer's ERP system or accounting software. Payers can design automation for certain jobs and processes in their payment workflow.
Business Size	Small to mid-size businesses.	Medium to large businesses with development resources.
Checking Account Registration	<p>Registration required.</p> <p>Payers must enroll the checking accounts they wish to pay from within the DPX platform, which involves a screening and confirmation process.</p>	<p>Registration required.</p> <p>Payers must enroll the checking accounts they wish to pay from within the DPX platform, which involves a screening and confirmation process.</p>
Usage Billing	<p>Optional.</p> <p>The option to bill the payer or their reseller directly for the number of payments they've used throughout the course of the month.</p>	<p>Optional.</p> <p>The option to bill the payer or their reseller directly for the number of payments they've used throughout the course of the month.</p>
Customization	<p>Payment information (payee name, amount, check number, remittance info, etc.) can be customized on a payment-to-payment basis. Payer information (logo, signature, payer imprint) is saved to the checking account which does not enable changes on a per-payment basis.</p>	<p>Payment information (payee name, amount, check number, remittance info, etc.) can be customized on a payment-to-payment basis.
